SUMMARY

Senior full-stack engineer with 4.5+ years shipping production web products for AI and e-commerce, currently at Valopt (France, remote), where the AI Chatbot Widget I led handles 1,000+ customer interactions a day. Independently built two SaaS products end to end: **Botly**, a multilingual AI support assistant with RAG, and **Auto Collect AI**, a multi-tenant invoice-chasing platform. Strongest in React, Next.js, TypeScript, Node.js and PostgreSQL.

EXPERIENCE

Senior Full-Stack Developer | Valopt

Jun 2024 – Present

France · Remote

- Spearheaded the **Valopt AI Chatbot Widget** from concept to production: a website chat widget streaming AI replies over Server-Sent Events, handling **1,000+ customer interactions daily**.
- Architected the AI agent monitoring and analytics dashboard in Next.js 14, Strapi and TanStack Query.
- Built a Next.js 14 (App Router) and Node.js stack with SSR and custom middleware, delivering sub-second responses and keeping Core Web Vitals (LCP, CLS) in range.
- Created and now maintain the accessible React, Tailwind CSS and SCSS component library used across Valopt products.
- Developed ValoptMailer, a secure email automation service (Node.js, OAuth2), and the SEO-first Valopt.ai website on a Strapi headless CMS.

Web Developer | eVenturers Solutions

Sep 2021 – Apr 2024

Puducherry, India

- Led development for two French PrestaShop stores (Ecigplanete retail, Smoke-Market wholesale) and optimized the checkout flow for **10,000+ monthly active users** through code splitting and image optimization.
- Built internal tools from scratch: real-time stock tracking, Calcula revenue reporting by customer group and region, and bulk supplier ordering with PDF invoices.
- Integrated WhatsApp and SMS messaging for win-back campaigns and direct customer support, and designed a referral and loyalty-points system to improve retention.

PRODUCTS I BUILT

Botly | AI support assistant for Indian businesses

2026

Next.js, TypeScript, Supabase, Claude API, pgvector · botly-rosy.vercel.app · github.com/vijayaprathap1/botly

- A widget any website adds with one line of code: crawls a business's website, drafts FAQs and policies with Claude for owner approval, then streams answers in English, Tamil and Hindi (including mixed-language messages), grounded only in approved knowledge.
- Hybrid retrieval (pgvector + PostgreSQL full-text search, reciprocal rank fusion) once knowledge outgrows the prompt, plus prompt caching to keep answers accurate and costs flat.
- Row-level security on every table, Shopify and WooCommerce order tracking, WhatsApp and email lead alerts, Razorpay billing; **150+ automated tests** and an AI evaluation step that blocks launch until prompt-injection tests pass.

Auto Collect AI | B2B invoice-chasing SaaS

2026

React, TypeScript, Fastify, PostgreSQL, Stripe · github.com/vijayaprathap1/autocollect-ai

- Syncs unpaid invoices from Stripe, QuickBooks Online and CSV into multi-step email and SMS reminder workflows.
- Multi-tenant PostgreSQL with row-level security, custom authentication with secure sessions, role-based access, an admin console and Playwright end-to-end tests.
- Usage-based billing through Stripe: credits are deducted in the same database transaction as each message sent.

SKILLS

Languages & frameworks	TypeScript, JavaScript, React, Next.js (App Router, SSR), Node.js, Fastify, PHP, Tailwind CSS
Data & APIs	PostgreSQL (row-level security), Supabase, MySQL, REST, GraphQL, TanStack Query, Strapi
AI & real-time	Claude and other LLM APIs, RAG, pgvector, prompt caching, AI evaluation, SSE, WebSockets
Payments & integrations	Stripe, Razorpay, QuickBooks Online, Shopify, WooCommerce, WhatsApp Cloud API
Quality & UI	Playwright, Vitest, Jest, BrowserStack, design systems, accessibility (ARIA), Core Web Vitals

EDUCATION & LANGUAGES

B.Tech, Computer Science & Engineering · Pondicherry Engineering College

2016 – 2019

Languages: Tamil (native), English (professional working proficiency)
